Work Experience

Postdoctoral Researcher, Faculty of Information Science and Electrical Engineering, Kyushu University, Fukuoka, Japan Apr 2025 – Present

- Developed a real-time person segmentation system based on LiDAR-camera calibration for mobile robot navigation, validated through field experiments.

Research Assistant, Faculty of Information Science and Electrical Engineering, Kyushu University, Fukuoka, Japan Oct 2024 – Mar 2025

- Modified an RGB-based object detection model with ultra-wide cameras for heavy machinery in construction sites.

Research Intern, NASA Jet Propulsion Laboratory (JPL), Pasadena, CA, United States Feb 2024 – Apr 2024

- Designed a DL-based restoration model to denoise images of Permanently Shadowed Regions (PSRs) on the lunar surface, reducing the uncertainty in VIPER rover and human traverse planning.

Part-time Software Engineer, Living Robot Inc., Fukuoka, Japan Oct 2020 – Jan 2024

- Built an ML/DL-based model using time-series data from olfactory sensors to predict health status from patient excretion, and deployed it in a hospital setting.
